

Have scientists overlooked the most obvious?

### Next Probable Earthquake to hit Mexico City

“The National Autonomous University of Mexico (UNAM), one of the country's most prestigious seats of higher learning, said there was **no scientific explanation** for three major quakes on the same day and attributed it to pure coincidence”. **What is the probability** of 3 earthquakes hitting Mexico City on the same date, September 19 (between 0.000751% and 0.00000024% according to some experts).

Using math and [www.Kerrytheory.com](http://www.Kerrytheory.com) the answer might just become obvious. Neptune has a purpose in our Universe; its job is to control our environment, the oceans, volcanoes, atmosphere, hurricanes, tornadoes, and all situations involving environmental changes to our earth. Why haven't we noticed the correlation between the planets and things occurring on Earth? Because up to now we've had no "fixed" rules using math to make these discoveries and therefore they have not been accepted by the scientific world.

Looking below, you can see the exact positioning of the planets during the September 19<sup>th</sup> earthquakes in 1985, 2017, and 2022, and **it's not a coincidence**. Mexico City was founded on March 13, 1325, which is the top line of each chart below. The positioning of the transiting Sun (present time), is always 180-degrees to the position of natal Mercury on September 19<sup>th</sup> of each year.

Let's examine the three September 19<sup>th</sup> earthquakes and show exactly what is going on using math, and the Kerry Theory. This is just one pattern for Mexico City. There are two definite patterns for Mexico City. There is no way to stop an earthquake from happening, but knowing in advance may help to save lives and structures. **After you read and understand how this operates, the end of this document may blow you away.**

**What is SIGN agreement?** Planets in the same SIGN only need direction for the energy to flow and they get this by the 120-degrees "positive" aspect or the 90- or 180-degrees "negative" aspects; being in the same SIGN is **just like wiring** that needs a connection. There is a natal planet and there is the corresponding transiting planet, and they are really the same planet, one represents the time you were born and the other represents the present time.

#### Mexico City founded March 13, 1325

On September 19 of any given year, transiting Sun will be in Virgo, and 180-degrees (or exactly opposite) Mexico City's natal Mercury. On September 19, 1985 at 7:19 am the earthquake struck.

**Look below.** Planets in the same SIGN only need direction for the energy to flow. Transiting Mercury and transiting Sun are both in Virgo, which means the “negative” energy of transiting Sun to natal Mercury may occur.

**September 19, 1985**

Any transiting inner planet (Mercury, Venus, or Mars) or the Moon, in the same SIGN as transiting Sun can join the influence. You must have an aspect from both the Sun and Mercury, or another transiting inner planet in the same SIGN as transiting Sun within 3.5-degrees or closer, to either natal or transiting Neptune. It cannot get any easier!

**September 19, 1985**

**Planets changing SIGNS.** If any planet is changing SIGNS (for example, going from the SIGN Aries to the next SIGN Taurus) within 6.5-degrees, then both SIGNS are operating. There is no switch that is thrown. When a planet moves from one SIGN to the next, it is a gradual process, and during this progression, both SIGNS exert an influence.

**Now for some doubters.** Let's look starting with 1986 to the present time, always using September 19<sup>th</sup> of each year. All charts are calculated for sunrise at Mexico City.

**Definitions**

All planets, including the Sun and Moon, have a 6.5-degree orb when changing SIGNS. T (green) stands for 120-degrees; Q (red) stands for 90 or 180-degrees. Gray highlighted planets show out of orb.

September 19, 1986 – Not occurring; Mercury is 4.67-degs from a 90-deg aspect to Neptune, out of orb.

There is a shared fault line between Mexico City and the San Francisco Bay area in California. When you look at the **two largest** earthquakes in the **last 100 years+** in the San Francisco Bay area, you see an interesting line up, an oddly similar pattern. **Both times** transiting **Mercury** was **90-degrees to transiting Neptune** and natal Sun was either conjunct within 3.5-degs, or 180-degrees Neptune. Also notice that transiting Neptune was 180-degrees positioning some 89 years later!

**San Francisco was founded on June 29, 1776**

This is the April 18, 1906, at 5:12am, 7.9 magnitude that devastated San Francisco.

This is October 17, 1989, at 5:04pm, known as the Loma Prieta Earthquake, which severely shook San Francisco and the Bay area.

**What are the odds** that all of this is pure coincidence? We have come to learn and understand that the meaning of "random" means something that does not produce the same outcome or consequences every time it occurs when under identical circumstances. This is certainly not random.

If I am correct in this analysis, then come the fall of 2027 (5 years from now), because transiting **Neptune will be in Aries** and "negative" to the natal Sun, each time Mercury is "negative" to the natal Sun and Neptune, an earthquake would be possible. Neptune moves slowly; the Bay area will become unstable starting in the fall of 2027.

First example:

September 8, 2027
