

US Stock Market Math

After many years of research, I've discovered some truths to life, and of course, I had the desire to share with others. How does one contact a website like "X" with some astounding revelations with **proof in math** to back it up? You cannot. You can however read what "X" or Facebook or other social networks want you to read. This suffocates progress; it is suddenly like people are communicating on just one level and the level is "fixed".

So, I've found Brighteon Social Network and have decided to give it a try. I have a website www.kerrytheory.com and about two years ago gave an **easy prediction** about the Stock Market. Yes, two years ago, posted for all to see. There is enough evidence in math, that people should be asking "Is she right"?

Just one example, when the transiting Moon and Mars are in the same SIGN and very close to each other (a conjunction) they cause public panic, and work with the outer planets to influences what will occur on earth. Crazy, well you might think so until you see the math. One way, (and there are many ways), you can use "Kerry Theory" and the software coming out soon, is to enable you to determine the extreme highs and lows of the US Stock Market. After you examine the information below, you tell me **what are the odds** that you can use detailed math, and you can easily predict the outcome of the Stock Market. You can look up the dates in time yourself!

October 28, 1929, Black Monday, the Stock Market crash begins. Notice transiting Moon 18 Virgo, natal Mars 18 Virgo, or **sharing the same SIGN** projected for about noontime on that day. Natal chart is when the Stock Market came into existence or May 17, 1792.

Of course, there is more happening, but let's just focus on these two inner planet connections as they are the "keys" to understanding why and how events occur.

October 19, 1987, biggest percentage loss 22.61% since the Stock Market Crash of 1929. Again, transiting Moon 18 Virgo, natal Mars 18 Virgo, or sharing the same SIGN.

Coincidence or is there a connection? Moon and Mars obviously plays an important role of stirring up emotions, which leads to a frenzy, a panic nature, when they have “negative” angles. The transiting Moon is in the sign of Virgo 12 times each year, or once a month, but not often within 3.5-degs of either Jupiter, Saturn or Neptune when these planets are in Gemini, Sagittarius, or Pisces, they form a 90 or 180-degree angle.

What is astronomy? It’s a science that seeks to explain what we observe in the Universe. This is what astrology has been trying to do for centuries but with little success due to no actual rules. Well we now have rules using math. We are beginning to see factual evidence that the arrangement of the ever-moving planets affects plants, animals, humans, geological processes, the weather and so forth.

Thus, an easy prediction (over two years ago). History has clearly shown us the weakness of the stock market.
